Online meeting

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 871473

[www.kraken-project.eu](http://www.kraken-project.eu)

- EU Horizon 2020 R & I programme under grant agreement No 871473
- Innovation Action
- From December 2019 to November 2022
- 10 Partners

## GOAL

Removing obstacles which prevent citizen's controlling and widely sharing their personal data by implementing a highly trusted, secure, scalable and efficient personal data sharing and analysis platform adapting state-of-the-art technologies

## KRAKEN SOLUTION

**SSI:** Provides user-centric access control to data. The data owner controls their data

**Crypto:** Enable a data-analytics-as-a-service platform integrated with the marketplace. Ensure end-to-end secure data sharing (confidentiality and authenticity)

**Marketplace:** Open and decentralised exchange system connecting data providers and data consumers, leveraging a blockchain network facilitating the business and legal logic on data transactions

*“Data spaces are central to the European strategy for data. The strategy envisages ‘a European data space as a genuine single market for data where personal and non-personal data, including sensitive business data, are secure and businesses have easy access to high-quality industrial data, boosting growth and creating value’.”*

## CHALLENGES

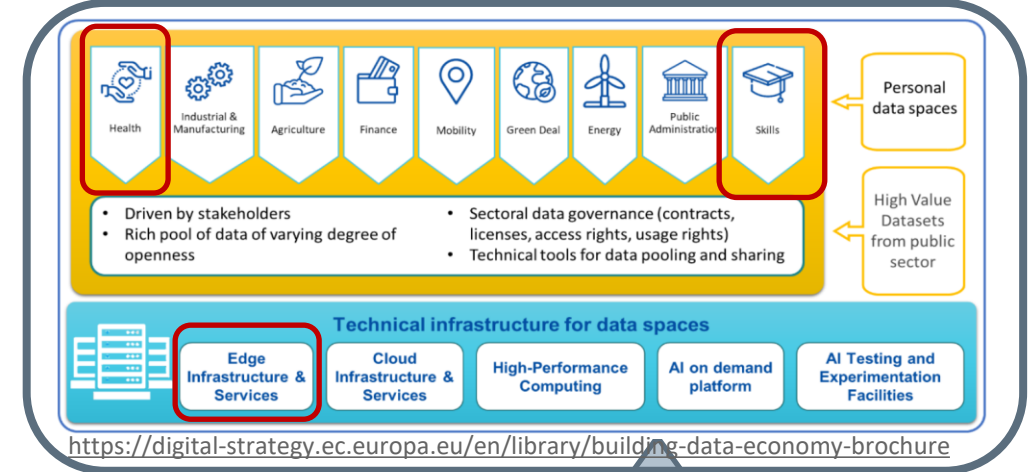

- Data can flow within the EU and across sectors
- Privacy and data protection fully respected (EU rules)
- Rules for Access and use of data ser fair, practical and clear
- Build data economy

## INITIATIVES

- IDSA
- Gaia-X
- Open DEI

- Provide decentralized SSI solutions and user centric access control.
- Cryptographic tools for:
  - Secure end-to-end data sharing
  - Authenticity and confidentiality of data analytics

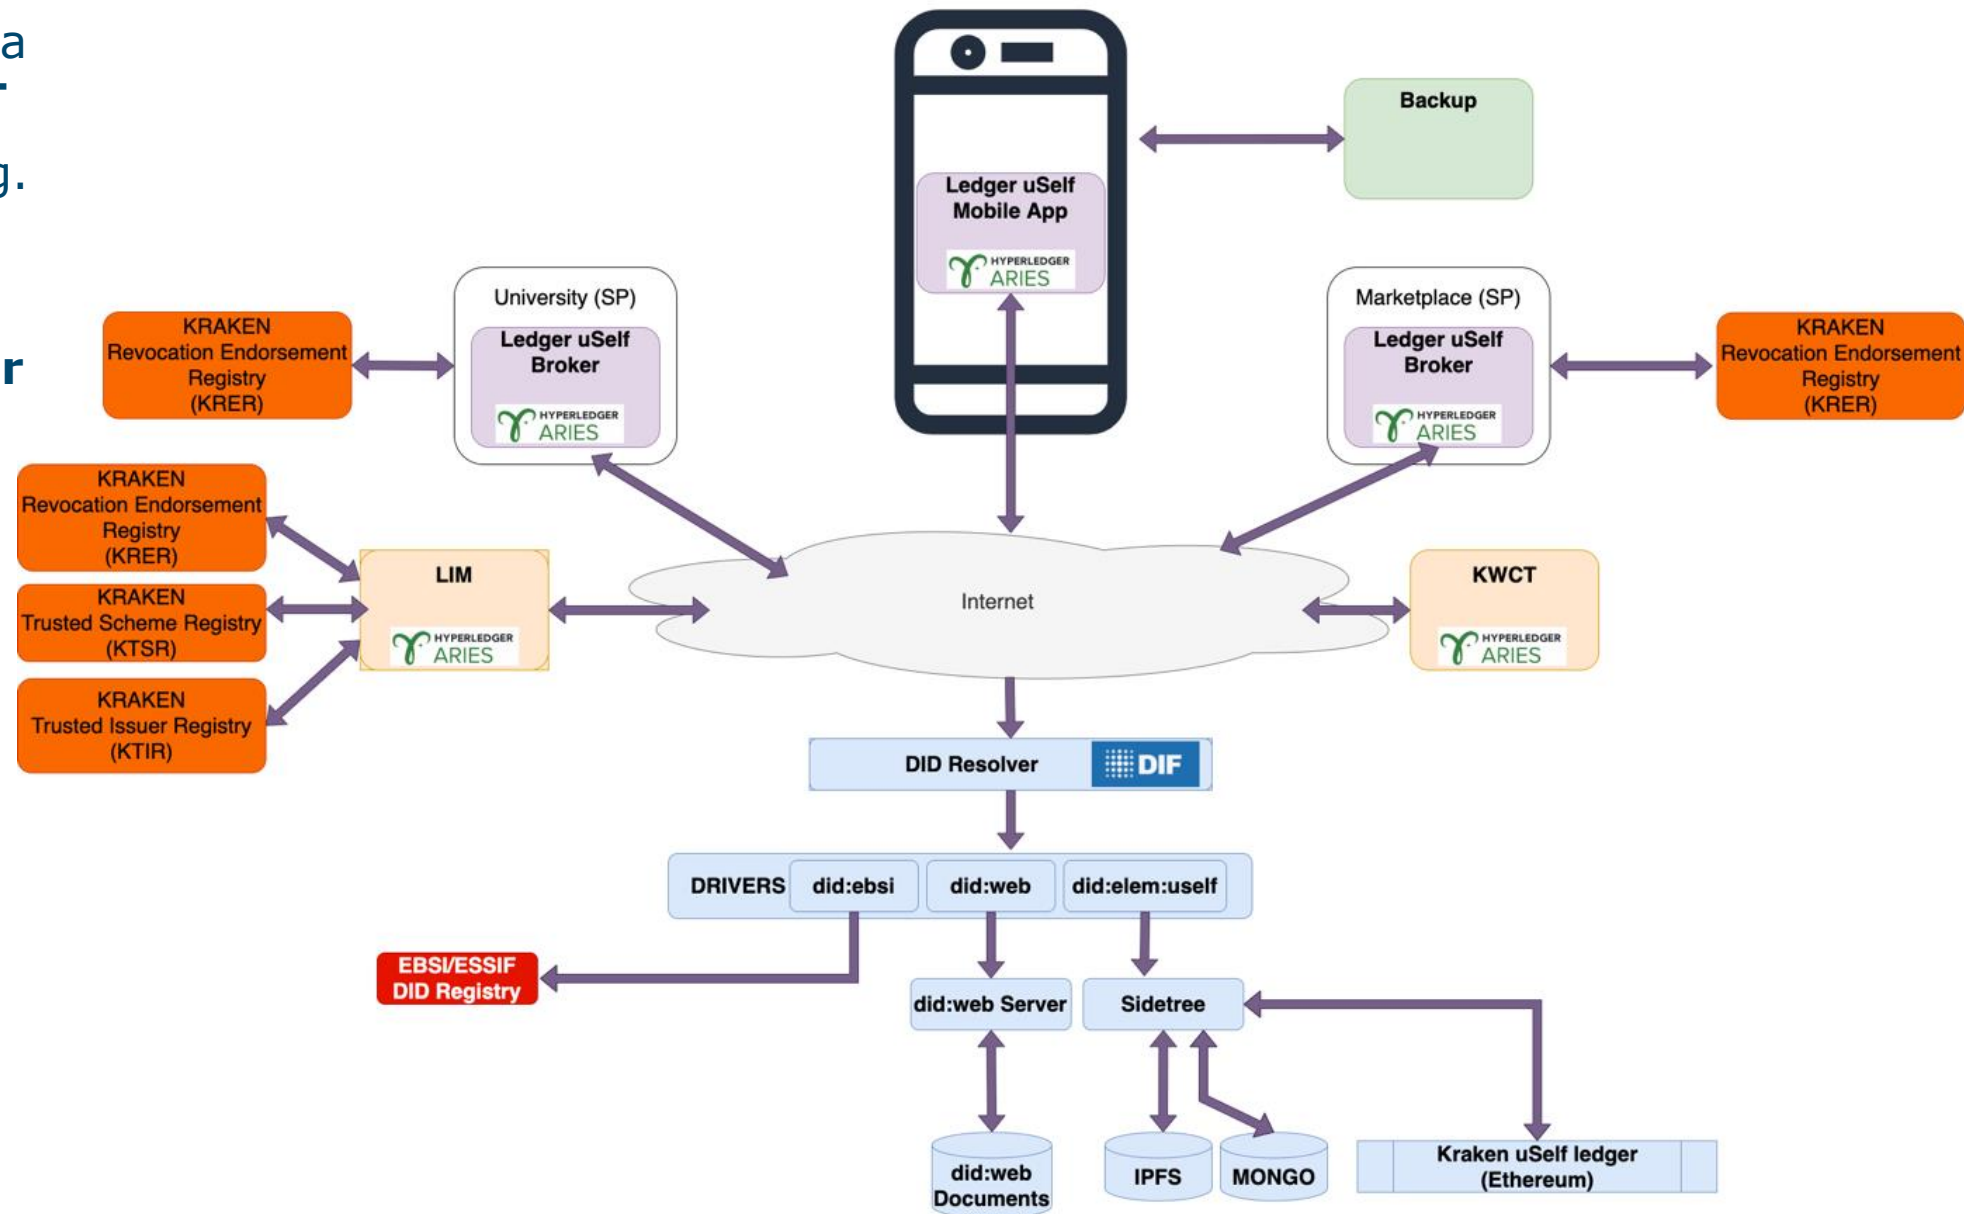

- Privacy metrics and usable interfaces.
- Ethical and legal framework
- Economic value and innovative business models for personal data spaces
- Piloting two domains: Health and Education

# SSI solution

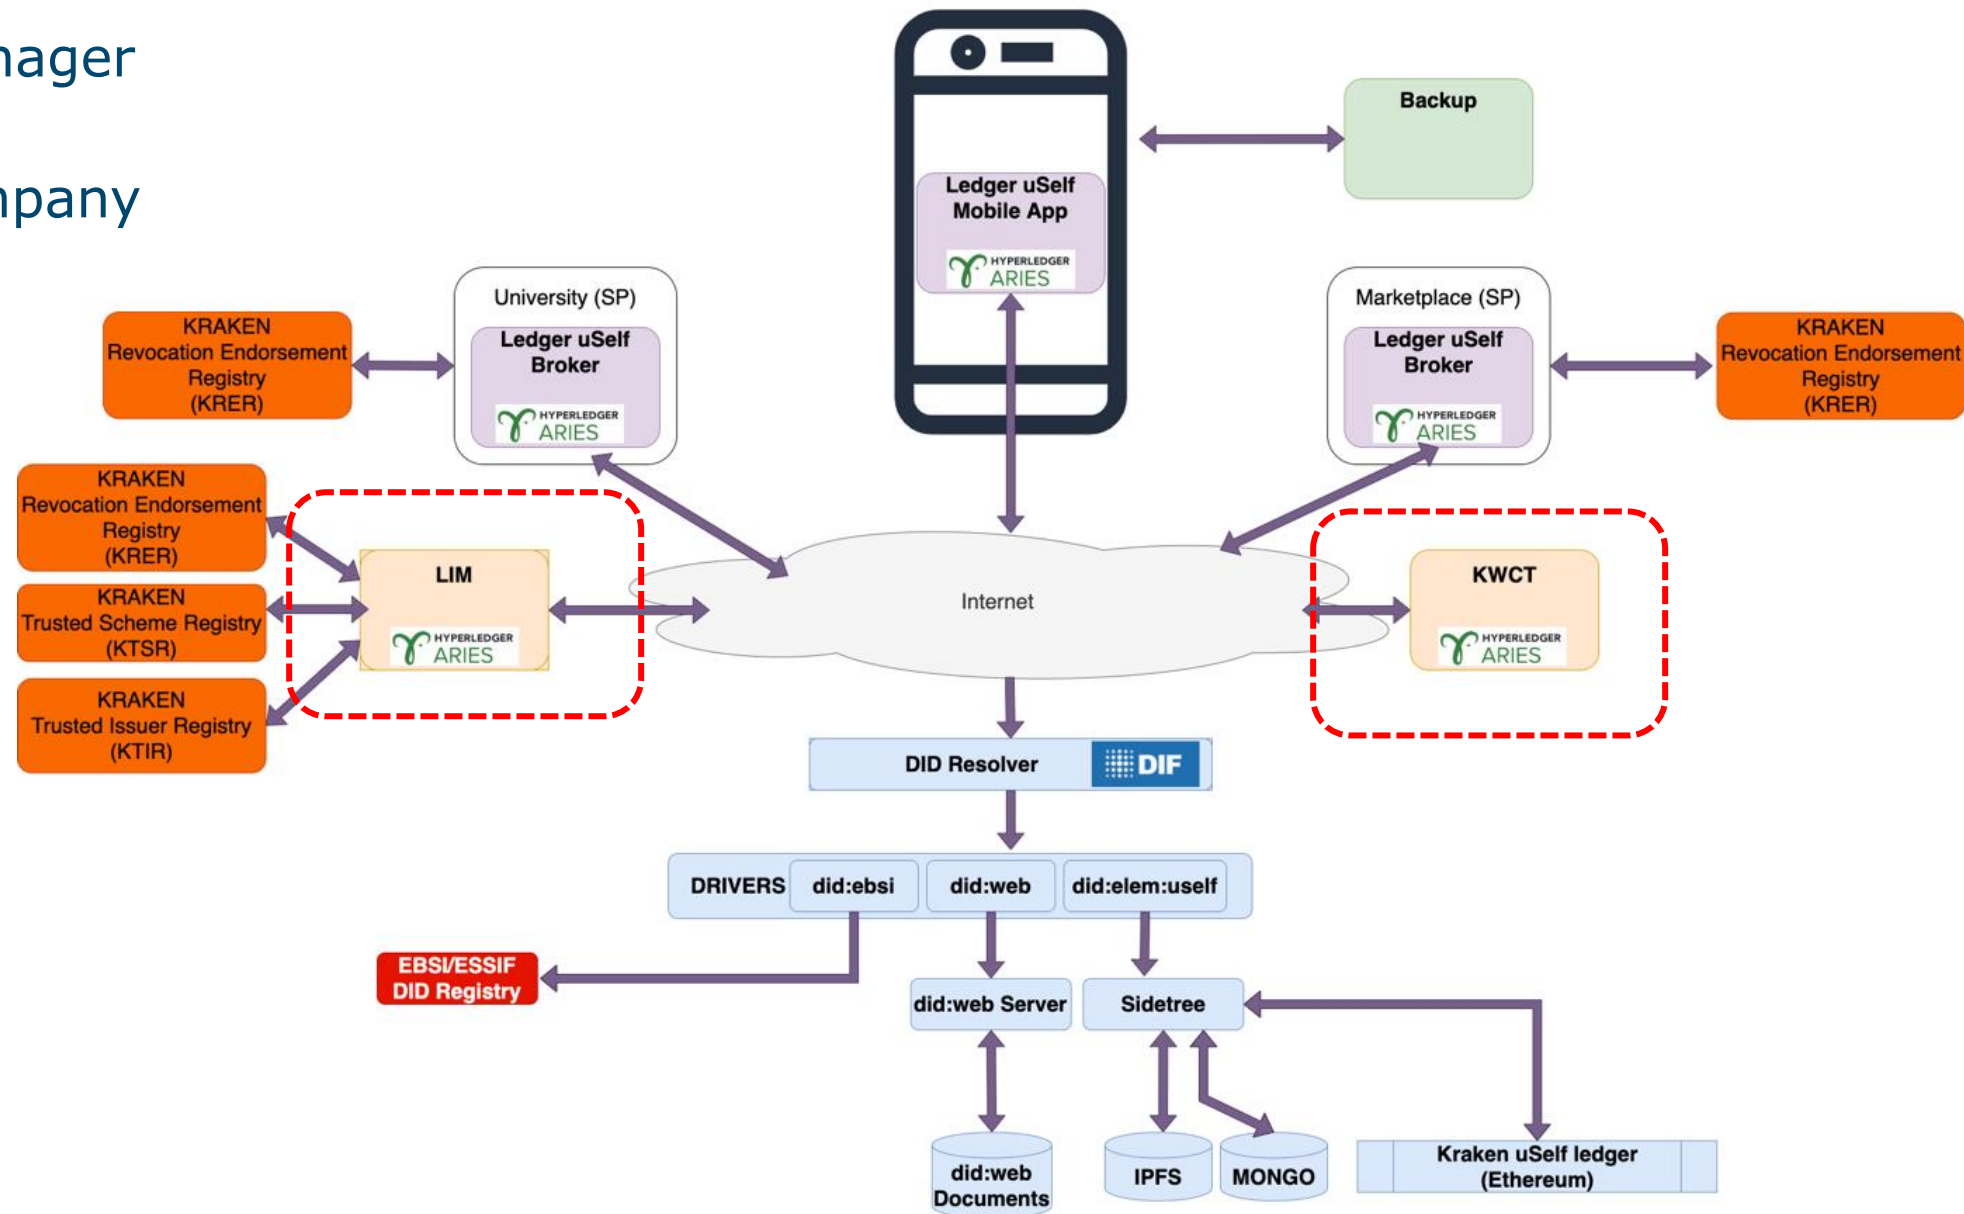

- Use of SSI providing a **decentralized user-centric** approach on personal data sharing.
- **SSI mobile app** for managing VCs and key material.
- **Ledger USelf broker** for SP integration.
- VCs with different **level of assurance** for accessing the services the platform provides.
- LIM creates VCs based on eIDAS network identity info.
- **Backup service** allowing the use of several devices. Device lost or stolen.
- Trust framework to **ESSIF/EBSI alignment**.

# SSI Verifiable credential management tools

- Legal Identity Manager (LIM)
- KRAKEN Web Company Tool (KWCT)

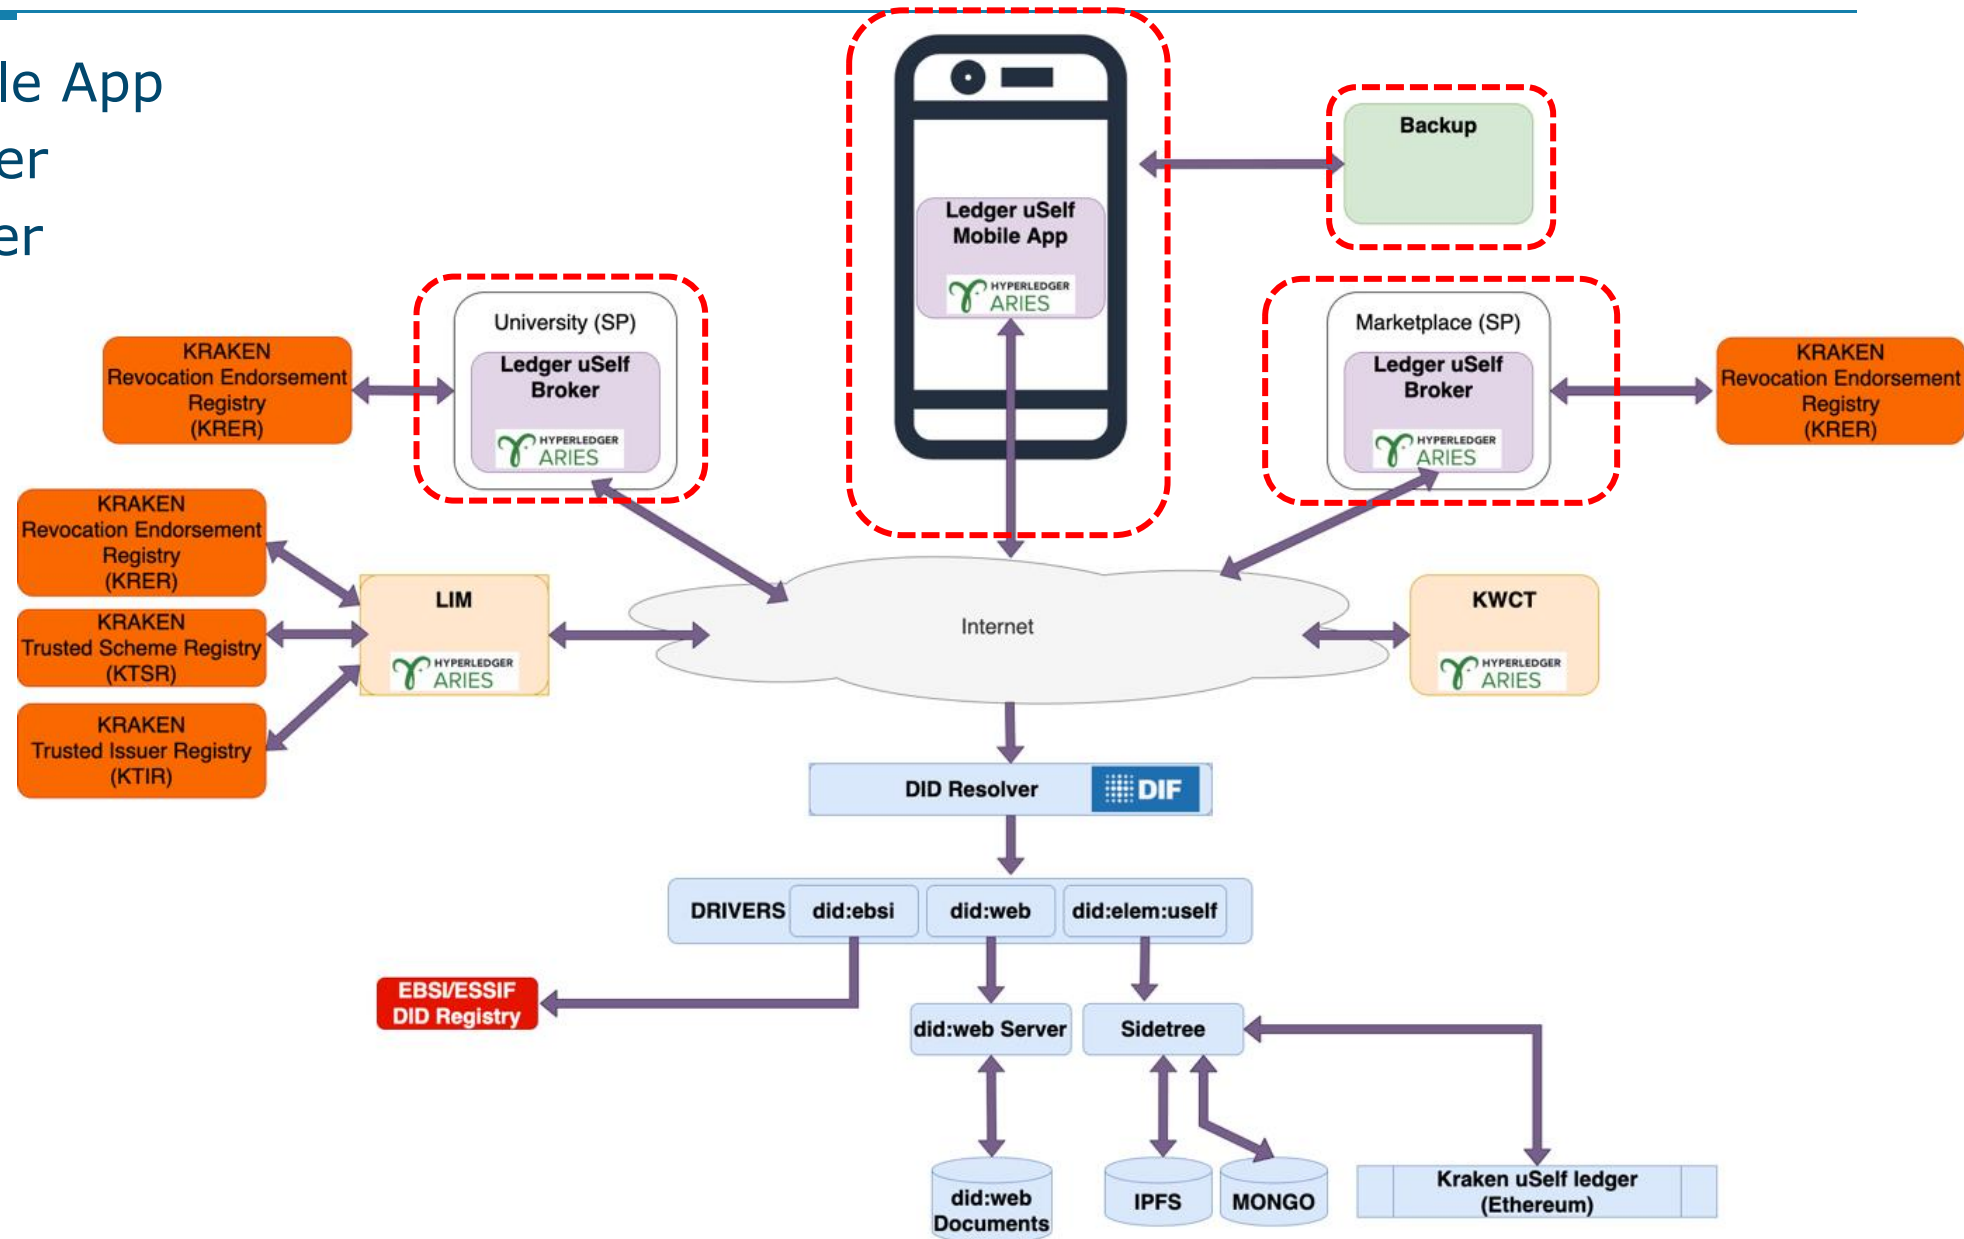

# SSI Edge Tools for the Decentralised Identity Solution

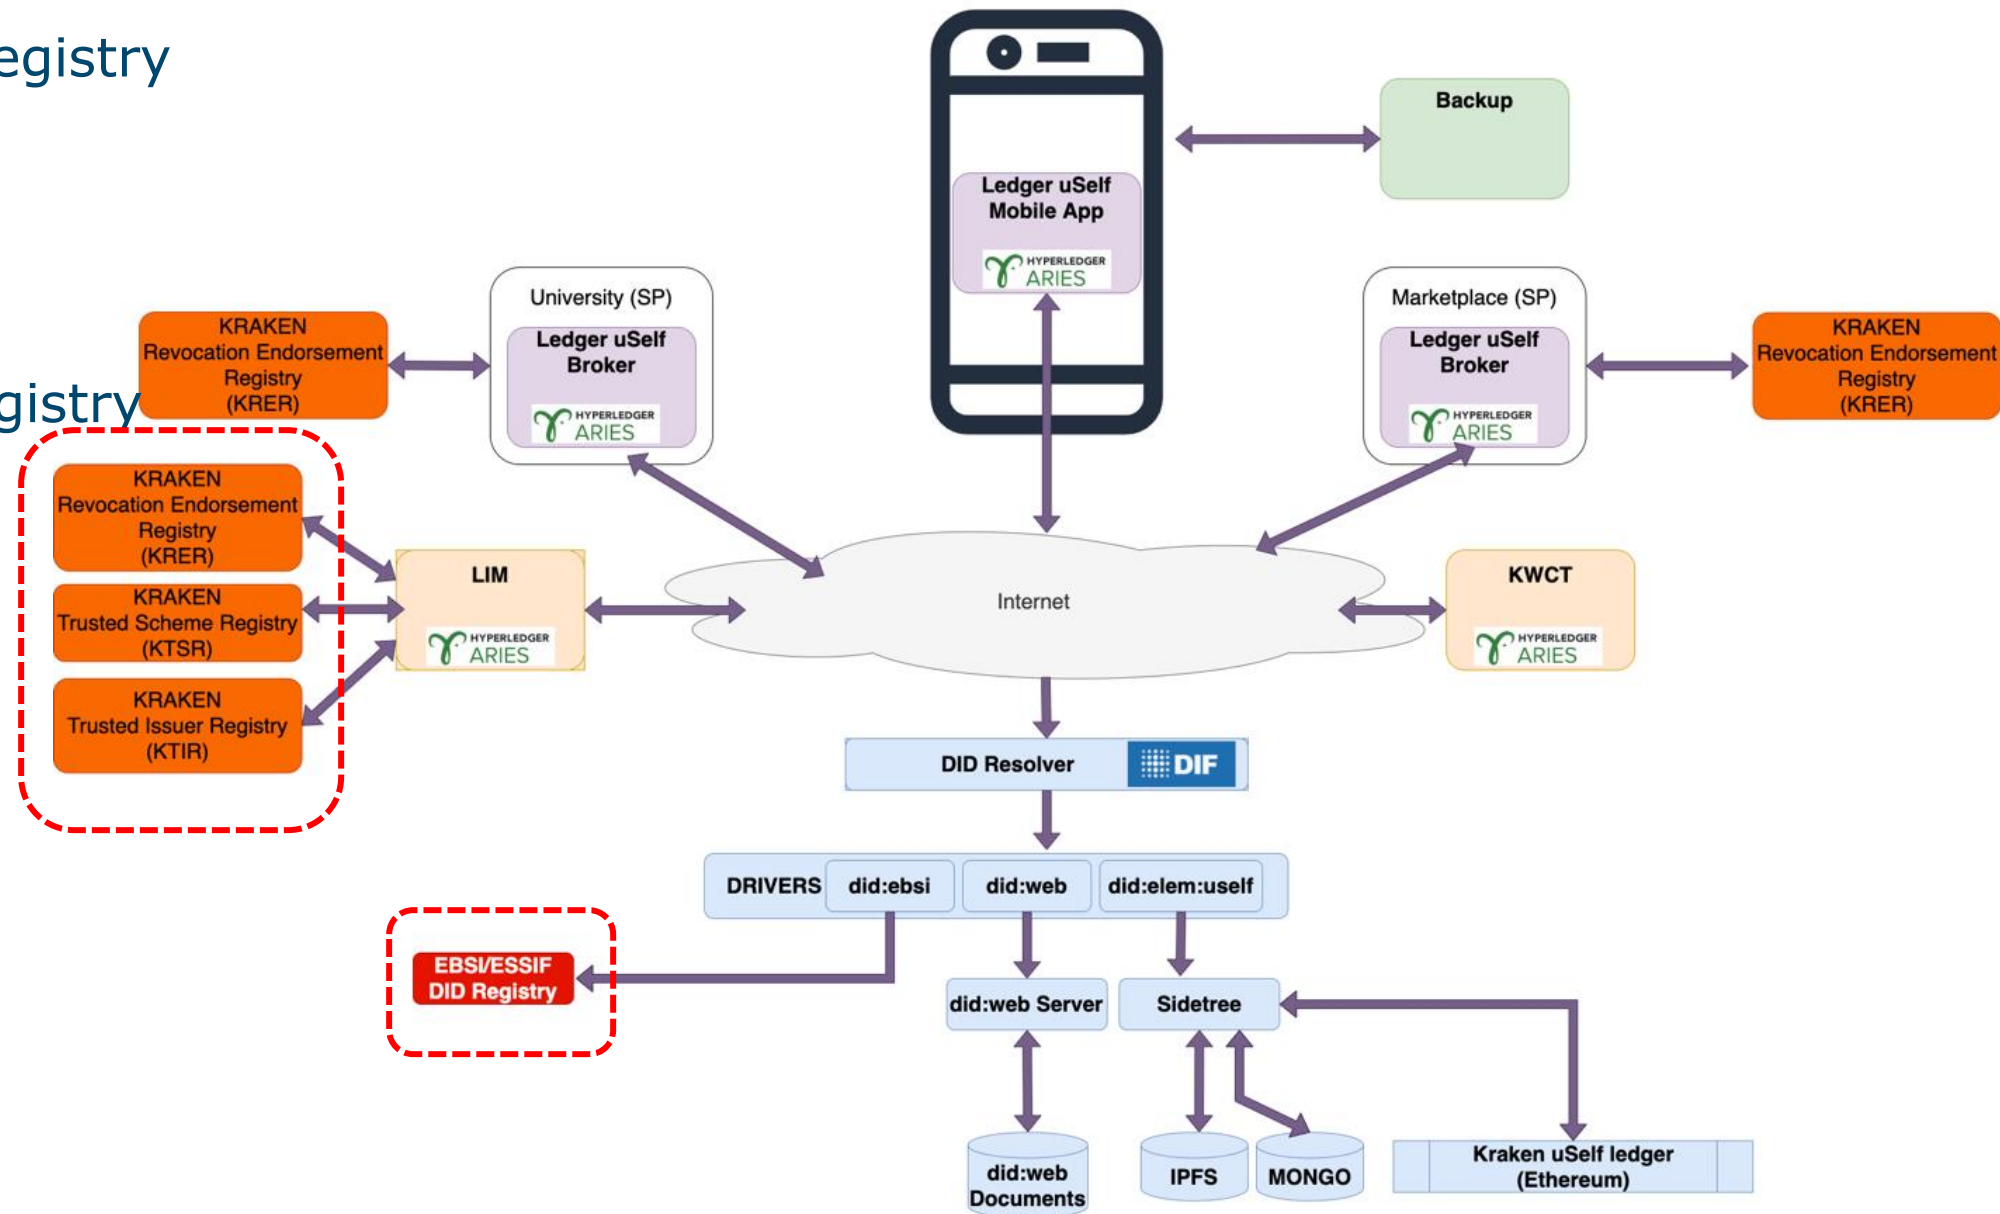

- Ledger uSelf Mobile App
- Ledger uSelf Broker
- SSI Wallet Manager

# SSI Trust Framework

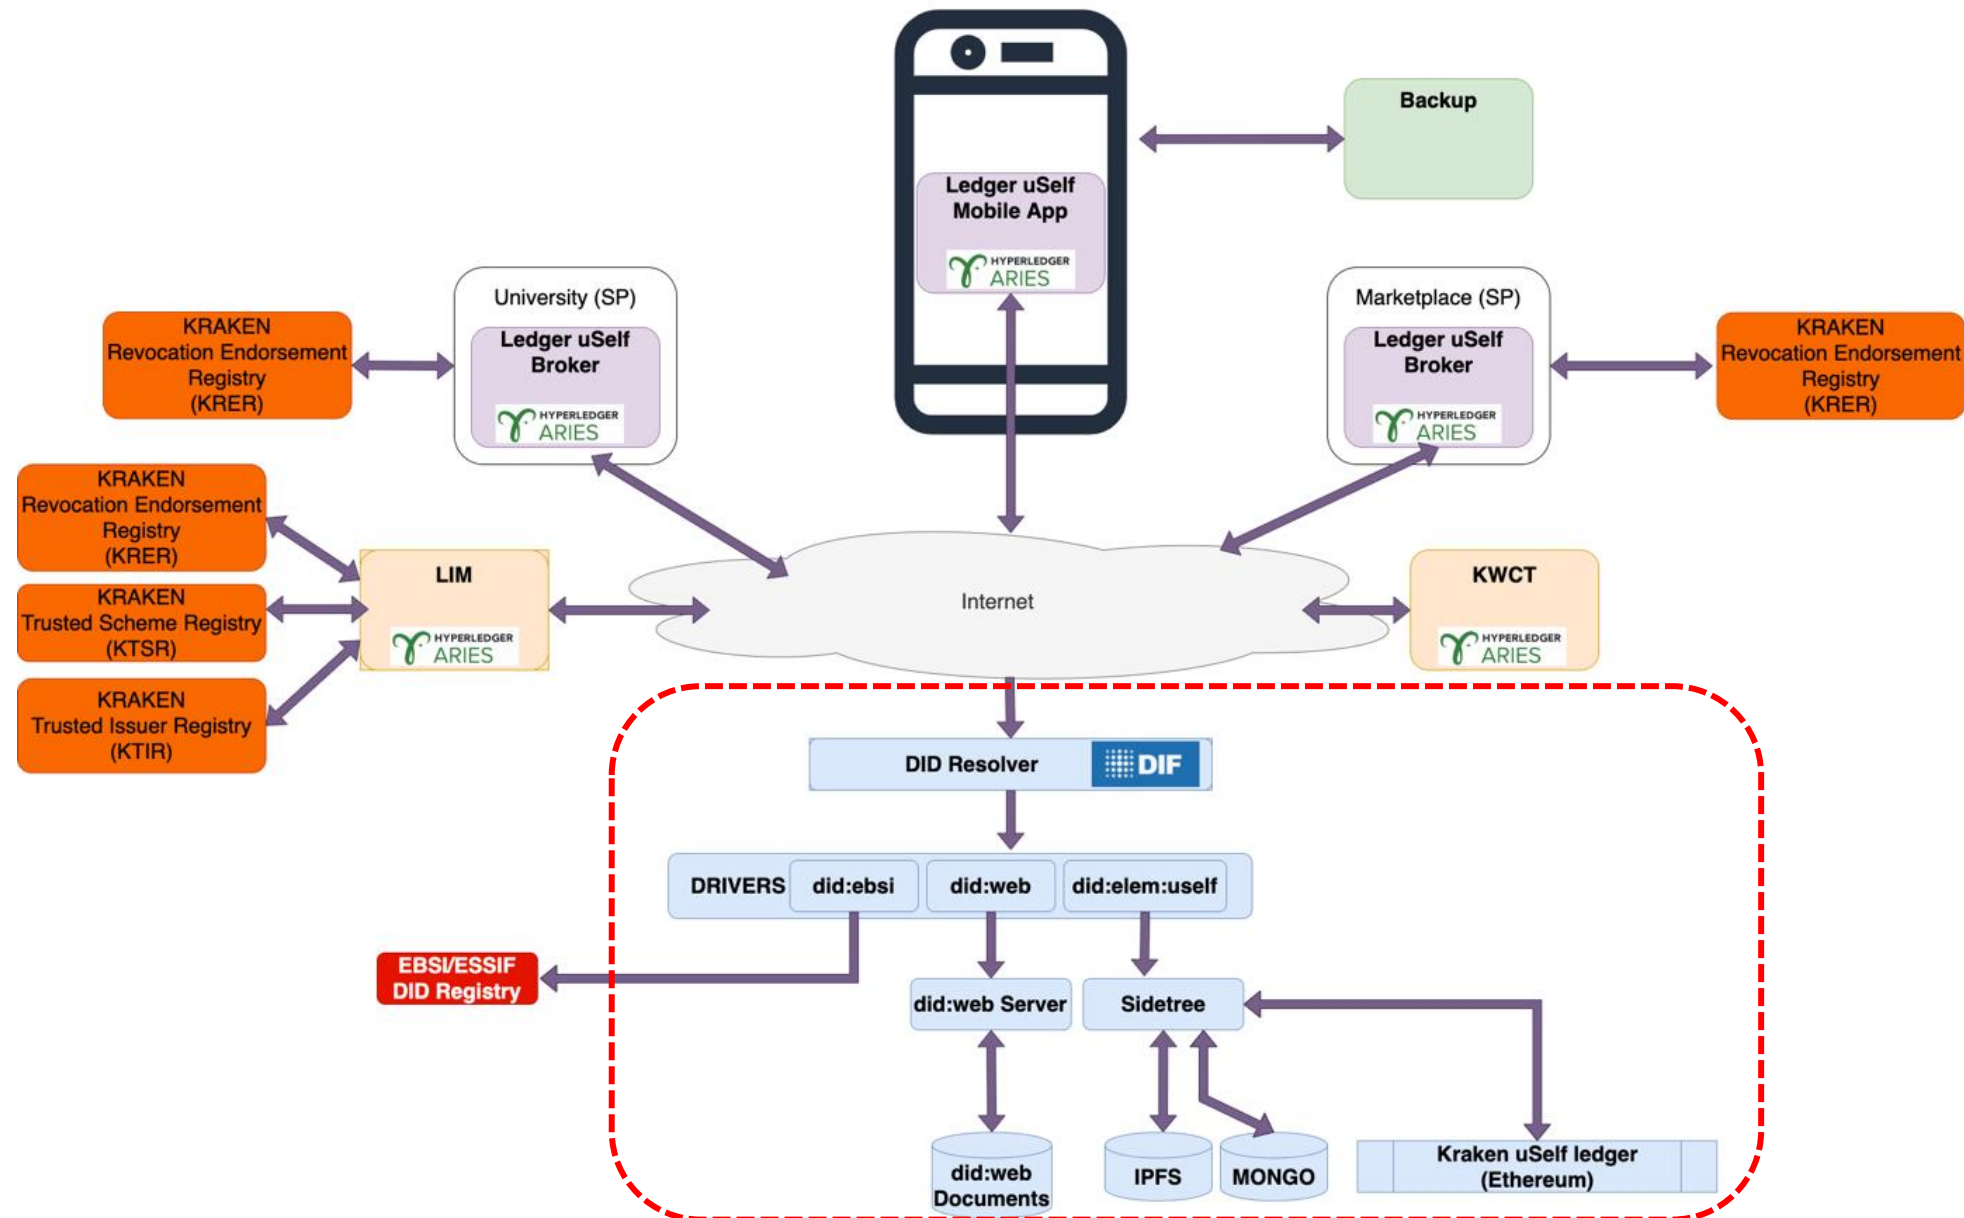

- Trusted Issuer Registry (KTIR)
- Trusted Scheme Registry (KTSR)
- Revocation & Endorsement Registry (KRER)
- DID Registry

# SSI DID Infrastructure

- DID Universal Resolver
- DID Web server
- Sidetree server

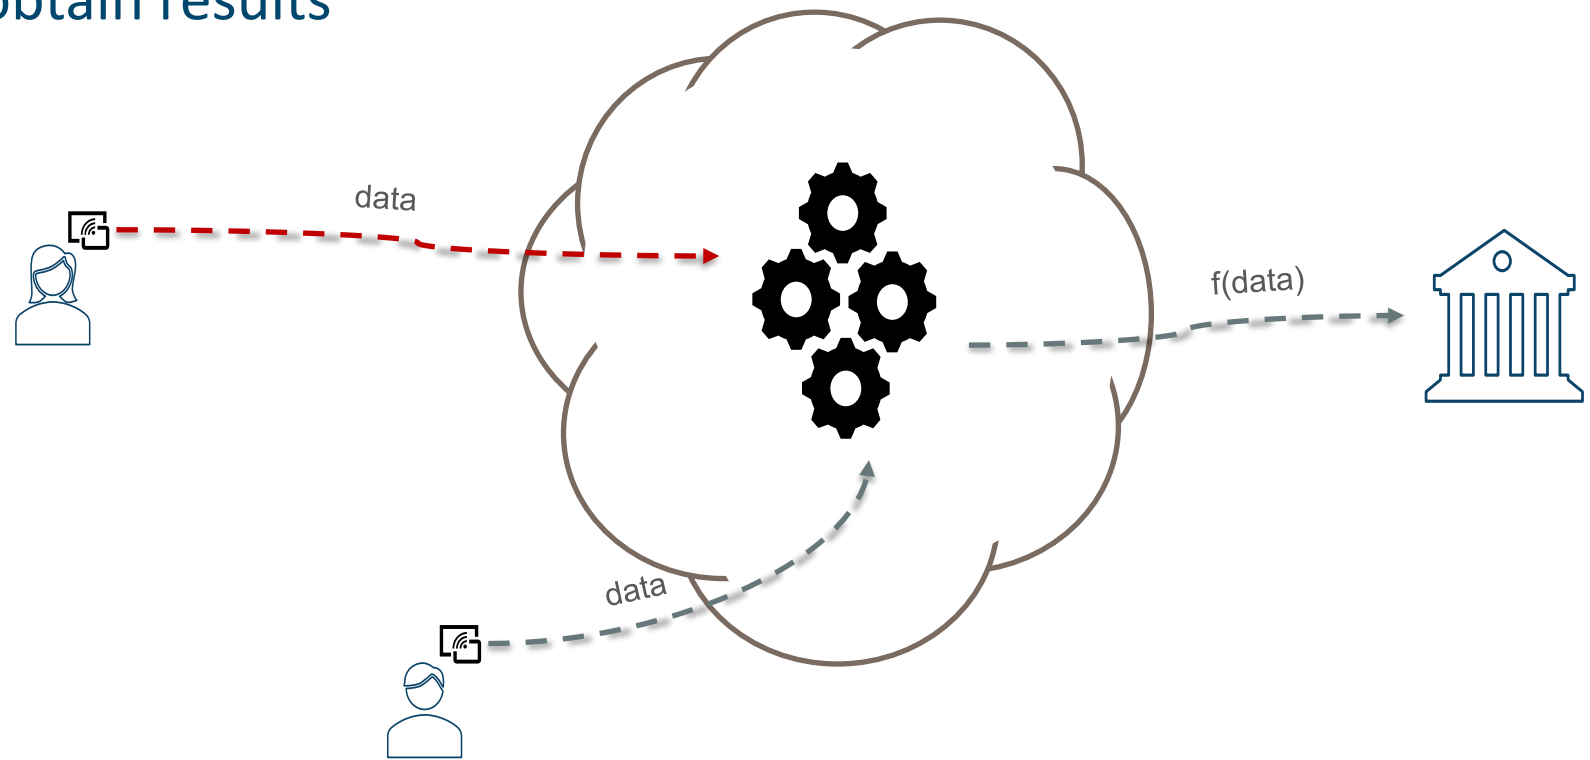

# CRYPTOGRAPHIC ARCHITECTURE FOR DATA

## MARKETPLACES

Privacy and Authenticity

- Data sets available from multiple producers
- Combine these data sets and sell combined statistics
- Consumers should only obtain results
- **Privacy?**
- **Authenticity?**

- Protocols for jointly computing on data
- Parties keep their input data private

But... I want to restrict the computations my data is used for!

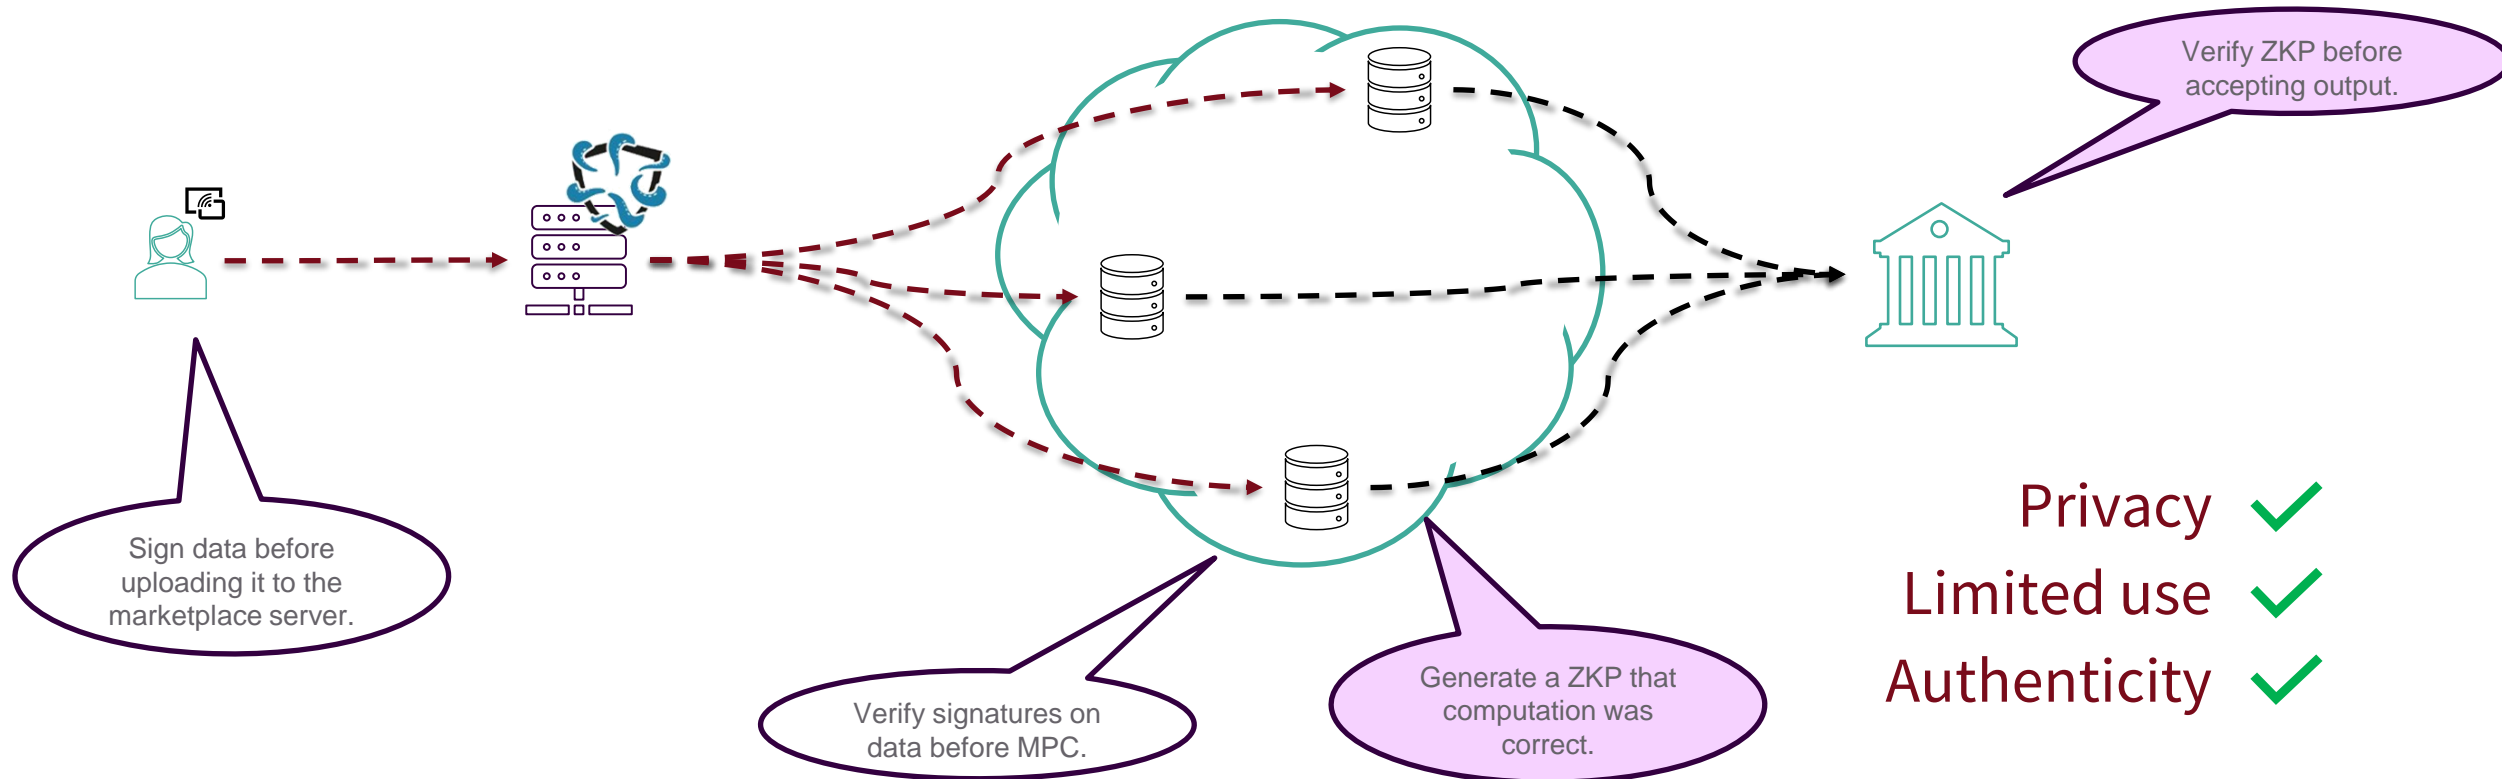

But... are there any authenticity guarantees?

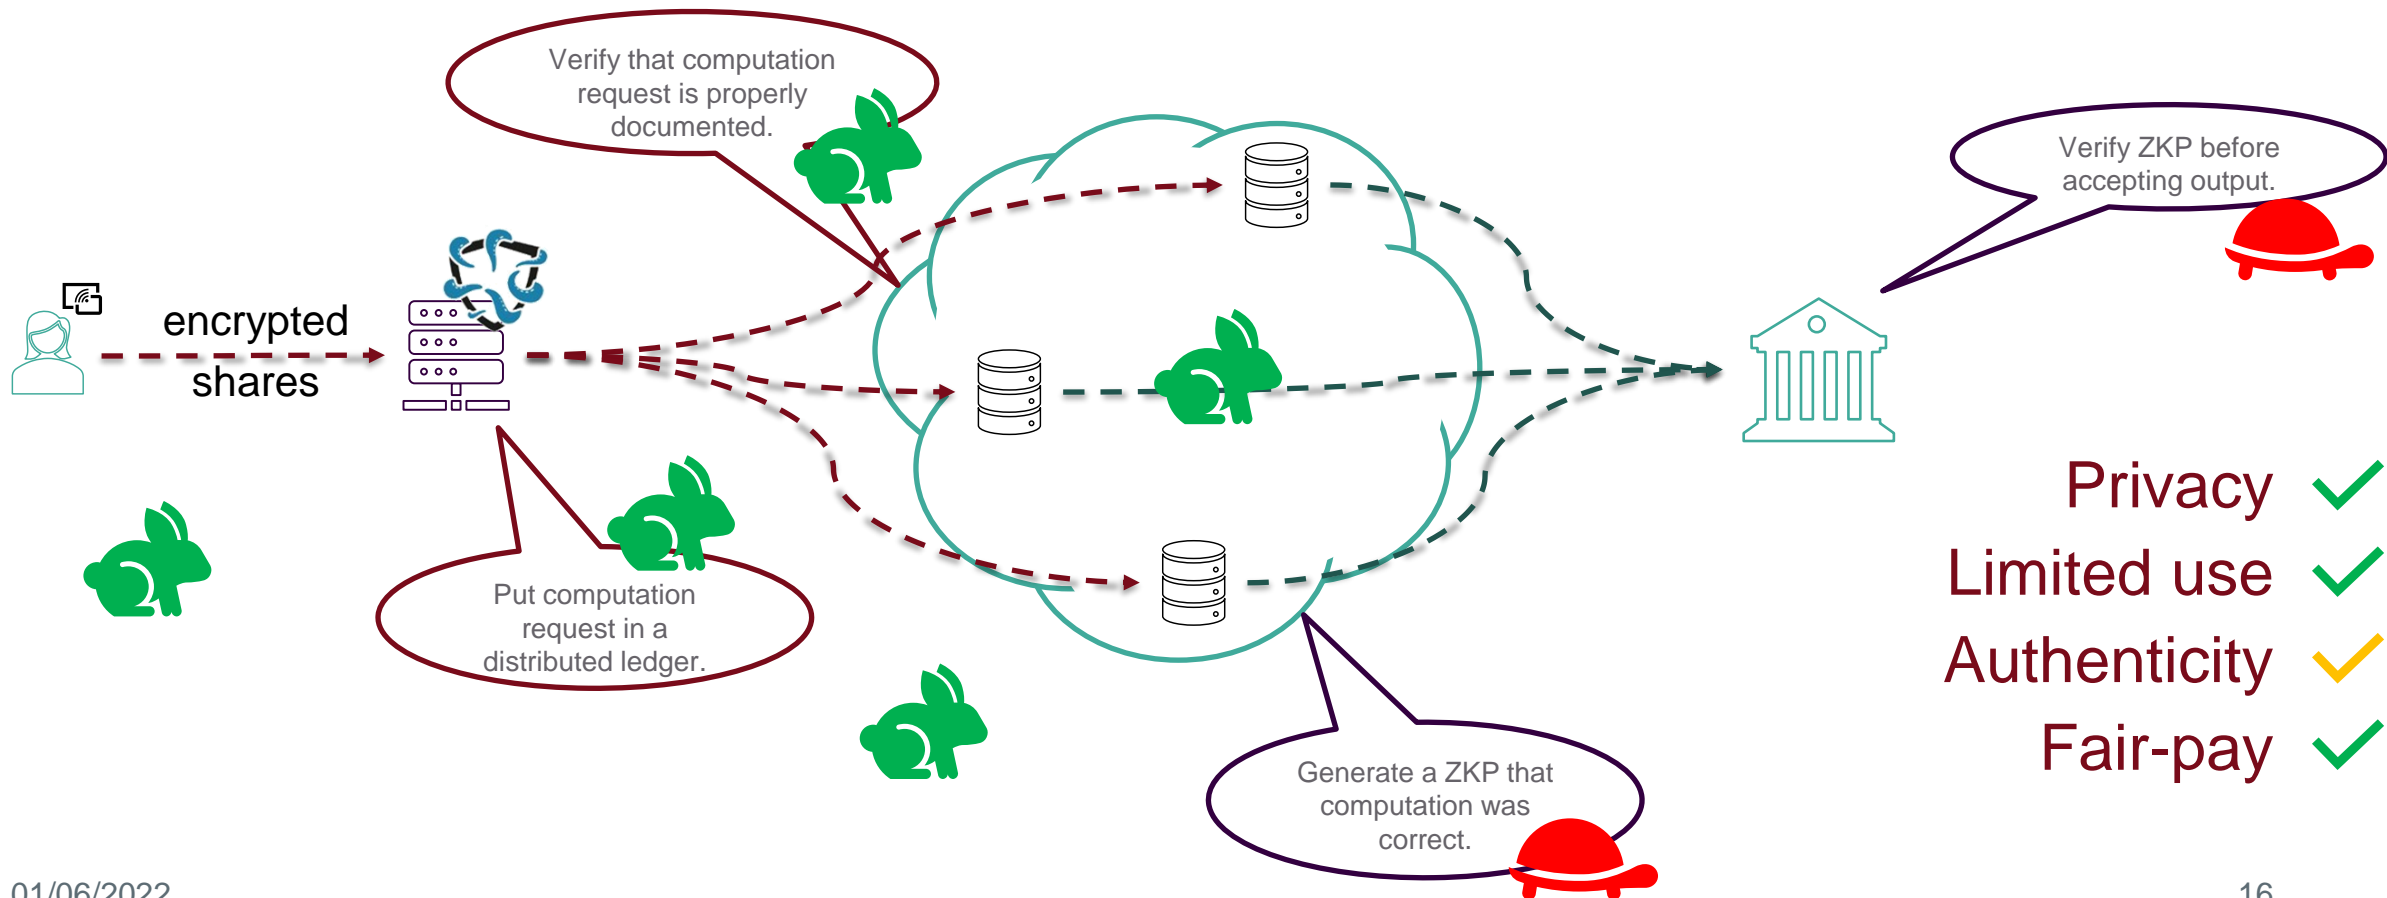

- Allows to prove knowledge of a certain piece of information **without revealing it.**

- Also: ensures correctness of computation

*Thank you for your attention !*
